Study Methodology

LexisNexis® commissioned Ipsos, a global market research and public opinion analyst firm, to undertake data collection and aggregate results for this study. Sample was provided by LexisNexis, drawing from its database of registered IDs containing all US law students. Approximately 40,000 U.S. law students were invited to participate in the online survey, which generated 2,030 responses. Students were selected from a sampling of ABA-accredited law schools and balanced by school tier and class to reflect the distribution of the overall population of law students.
